Photography enables us to capture and tell a story of an event, area or a particular scenario. The history of photography can be dated far back to the year 1823; however, the milestone of photography which was the inclusion of digital electronics can be dated back to the 1990s.

Today, photography has grown as an industry especially in the USA. There are colleges and academic institutions that teach photography as a course that leads to a career of photography. Some of the institutions even provide online photography courses to enable students learn remotely. Photography helps us to discover inspiration around us. Photography institutions teach all kinds of photography including videography, aerial photography, landscape photography and portrait photography.

Photography requires skill in order to capture only the best views of the world. The art of photography has reached an epic level today owing to the different types of photography to capture different aspects of life.
